

Sara Yun-Jung Liang (梁勻榕)

UX Designer · Service Designer

Taipei, Taiwan saraliang66@gmail.com saraaaliang.github.io

SUMMARY

UX Designer with a **Service Design** background, **7+ years** of design-related experience, and 3+ years focused on user research and experience optimization. Skilled in **user interviews**, **usability testing**, **journey mapping**, and translating requirements from business, engineering, and stakeholder teams into clear **design specs**. Hands-on experience using **Claude Code** to bridge design and implementation, from prototype through front-end build and **GitHub** deployment. Also brings earlier interaction-design experience collaborating directly with hardware engineers to validate touch-interaction design for public installations. UK-educated (MA Service Design, University of the Arts London) with international project experience; fluent in **Mandarin and English**.

CORE SKILLS

User Research

User interviews, survey design, usability testing, journey mapping, competitive analysis, personas, needs analysis, research synthesis

Service Design & Systems Thinking

Customer journey mapping, service blueprinting, visual style guides and design standards, stakeholder workshop facilitation, translating cross-functional requirements into design specs

AI & Implementation Literacy

Claude Code, Figma MCP, GitHub, VS Code, hands-on exposure to JSON config files, bridging design to working front-end

Interaction Design

Collaborated with hardware engineers on touchscreen interaction design, validating gesture/posture intuitiveness for public installations

Product UX

User flows, information architecture, wireframes, prototypes, responsive Web/mobile UX

Tools

Figma, Photoshop, Illustrator, Miro, Google Workspace, Notion

EXPERIENCE

UX Designer / Service Designer

Independent / Freelance · Aug 2023 – Present

- Founded and led "**Sharing Time**," a **B2B** internal knowledge-sharing platform for enterprise teams: personally sourced partner companies, planned and ran user research to validate audience needs, translated cross-functional requirements into clear design specs, and used **Claude Code** to bridge the design into working front-end code deployed on **GitHub**.
- Independently led user research and service design projects: conducted interviews, surveys, and journey mapping to identify pain points and service breakdowns, translating insights into personas, journey maps, and actionable product recommendations.
- Independently developed "**Sync AI**," a concept for an AI design-collaboration tool, in a **5-day sprint**: including research, personas, journey mapping, and high-fidelity prototypes, using **Claude Code** and **Figma MCP** to validate front-end implementation and address the communication gap between designers and engineers.
- Partnered with a London-based jewelry brand to study consumer purchase behavior and service expectations, translating feedback into brand and experience recommendations that contributed to a **1.25x increase** in average monthly sales.

Service Designer

GOV.UK (*digital government service, 500+ employees*) · Mar 2023 – May 2023 (3 months)

- Developed a future-service concept for community mental health support, partnering with the UK government's digital service **GOV.UK** under GDS user-centered design principles.
- Synthesized user research, secondary data, and market trend analysis to identify core needs and service touchpoints, using rapid testing to turn concepts into testable product and service ideas.
- Presented weekly to the government design team in **Design Critique** sessions to align on requirements; final concept received roughly **75% positive feedback** from public-service stakeholders after exhibition.

UI/UX Designer / Visual Designer

23 Design Co. (Design Consultancy, 1–30 employees) · May 2019 – Aug 2022 (3y 4m)

- Delivered **20+ websites** and digital product projects, owning user flows, information architecture, wireframes, prototypes, and UI design across devices.
- Conducted **usability testing** from the user's perspective to surface interaction blind spots, translating findings into actionable design directions such as interface refinement and interaction feedback design.
- Partnered with project managers, front-end engineers, and clients to align on requirements, translating cross-functional needs into clear, executable design specs; authored dev handoff documentation and led pre-launch QA.
- On a social-welfare education website project, drove a **10x increase** in community engagement through cross-device usability testing and content architecture redesign.
- Collaborated directly with hardware engineers to validate **touchscreen interaction design**, confirming whether gesture- and posture-based interactions felt intuitive to visitors, for high-traffic public installations.

Curatorial Experience Planner

Big Bright Room.co (Design Consultancy, 1–30 employees) · Aug 2017 – Feb 2019 (1y 7m)

- Planned experience flows, information presentation, and visitor circulation for **7** interactive installation and exhibition experiences, applying design thinking and service design methods.
- An outdoor interactive installation built with Uni-President Group drew over **10 million visitors**, the highest-attended installation at the 2018 event.

Visual Designer

Good People Advertising Co. (Advertising, 1–30 employees) · Oct 2015 – May 2017 (1y 8m)

- Contributed to TV and digital ad production from concept to delivery; one game TV commercial reached **3.8M views** on YouTube, reflecting strong content strategy and audience communication.
- Created a reusable **visual style guide**, spanning typography, color palette, and button styles, that later design work consistently extended from.

EDUCATION

University of the Arts London (UK) | MA Service Design, Oct 2022 – Jan 2024

Ming Chuan University | BA Digital Media Design, Sep 2011 – Jun 2015
